

Key Findings :-

Dataset Overview

- The dataset consists of about 5000 rows and 13 columns
- The dataset is mainly about the lifestyle of students and their mental health

Stress Levels & Demographics

- 853 students across various countries have a score less than 5, indicating a high amount of stress level
- Age doesn't play any significant role in stress level among students
- Gender-wise, while there isn't any significant difference in stress level, females tend to have higher stress levels than men
- Among male and female students, at each age males tend to possess higher mental health scores than women

Study & Sleep Patterns

- 238 students across the world study less than 1 hour and have an average daily usage hour of more than 5 hours
- Mental health score has a strong correlation with sleep hours per night and also with study hours
- Students having high stress levels across all ages tend to sleep on an average of only 5.4 to 5.5 hours, showing sleep directly affects stress level

Platform Usage & Stress

- Students using WhatsApp more frequently tend to show a high amount of stress level than others
- After WhatsApp, the second most high stress-causing platform is Snapchat
- The students using the Line platform tend to show low to medium amounts of stress level and have the least count of high stress level
- Platform like WhatsApp, KakaoTalk, Lime, etc. are being used for News, Entertainment, and Education
- Among all platforms, none of the platforms is being used for networking by students

Academic Level & Stress

- High school students have the highest stress level compared to graduates and undergraduates
- High school students also possess the least stress level than the remaining ones
- 18-year-old high school students have the highest stress level, followed by 19-year-old undergraduates, 24-year-old graduates, and 23-year-old graduates

- High school students who tend to show the highest level of stress use Snapchat, LinkedIn, and Twitter more
- The highest stress-causing platform WhatsApp is not widely used among high school students
- High school students also have the highest number of daily unlocks while graduates have the lowest, indicating high school students switch between various platforms daily

Country-Specific Platform Usage

- Among all countries, LinkedIn, TikTok, and YouTube are most used by students of Oman
- Snapchat, Facebook, Twitter (X), and Instagram are also used the most by students of Oman

Platform Purpose & Usage Patterns

- LinkedIn and YouTube have emerged as platforms used for educational purposes
- TikTok, Instagram, and Snapchat are used only for entertainment purposes
- Males tend to not prefer platforms like Line and KakaoTalk
- Females tend to not prefer VKontakte
- WhatsApp and WeChat are platforms where men dominate more
- All other platforms show equal engagement of both genders
